## DETAILED ACTION

### *Election/Restrictions*

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-9, drawn to a structure, classified in class 257, subclass 100.
- II. Claims 10-15, drawn to a method of packaging a structure, classified in class 438, subclass +1.

The inventions are distinct, each from the other because of the following reasons:

Inventions II and I are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case unpatenability of Group II invention would not necessarily imply unpatenability of Group I invention, since the process of Group II invention could be used to make a product materially different from that of Group II Invention. For example, in the method claim 10, the cap includes a spacer having a hole therethrough, a plate that is transparent to the optical signal, which is not recited in the device claim 1.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, the search required for Group II is not required for Group I and separate examination would be required, restriction for examination purposes as indicated is proper.

Art Unit: 2815

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
